

# Demystifying problem solving

Dmitry Chistikov

University of Warwick, United Kingdom

Logic Mentoring Workshop

14 February 2022

In seeking "indicators of suspicion" in investigations, suspects will need to have had:

- **Motive** to commit the crime (for example, financial gain or to seek revenge)
- Means to commit the crime (including tools and physical capabilities)
- Opportunity to commit the crime (including being at the crime scene at the time of the offence)

— Wikipedia on criminal investigation

In seeking "indicators of suspicion" in investigations, suspects will need to have had:

- **Motive** to commit the crime (for example, financial gain or to seek revenge)
- Means to commit the crime (including tools and physical capabilities)
- ▶ **Opportunity** to commit the crime (including being at the crime scene at the time of the offence)

What does it mean to solve the problem?

What does it mean to solve the problem?

**Problem:** Factorise a given number.

What does it mean to solve the problem?

**Problem:** Factorise a given number.

Which of the following are valid solutions?

What does it mean to solve the problem?

**Problem:** Factorise a given number.

Which of the following are valid solutions?

▶  $5 = 5 \cdot 1$

What does it mean to solve the problem?

**Problem:** Factorise a given number.

Which of the following are valid solutions?

▶  $5 = 5 \cdot 1$

▶  $5 = (2 + i) \cdot (2 - i)$

What does it mean to solve the problem?

**Problem:** Factorise a given number.

Which of the following are valid solutions?

- ▶  $5 = 5 \cdot 1$
- ▶  $5 = (2 + i) \cdot (2 - i)$
- ▶ No factorisation exists for 5

What does it mean to solve the problem?

**Problem:** Factorise a given number.

Which of the following are valid solutions?

- ▶  $5 = 5 \cdot 1$
- ▶  $5 = (2 + i) \cdot (2 - i)$
- ▶ No factorisation exists for 5
- ▶ for  $d$  in  $[2; n)$ : if  $d$  divides  $n$  then return " $d \cdot \frac{n}{d}$ "

## Reinventing the wheel/bike

Don't get intimidated

George Dantzig (1914–2005)

Find the right place

the office

**BBC**

In seeking "indicators of suspicion" in investigations, suspects will need to have had:

- **Motive** to commit the crime (for example, financial gain or to seek revenge)
- ▶ • **Means** to commit the crime (including tools and physical capabilities)
- **Opportunity** to commit the crime (including being at the crime scene at the time of the offence)

“There is an easier problem that you cannot solve: find it”

Engage with the problem!  
Guess and check // Trial and error

Engage with the problem!  
Guess and check // Trial and error

**Example:** What does the following program do?

```
for  $i := 1$  to  $n$ : do  
  for  $j := 1$  to  $n$ : do  
    if  $A[i] < A[j]$ : then  
      swap  $A[i]$  and  $A[j]$ 
```

## Tactics and strategy

C	A	T
C	O	T
C	O	G
D	O	G

## Tactics and strategy

S H I P

C A T  
C O T

Find the right questions!

*"How many vowels do intermediate words have?"*

## Tricks of the trade:

- ▶ What if the vectors are linearly independent?
- ▶ What if we just have an AND of constraints?
- ▶ What if we already know what happens with  $n - 1$ ?
- ▶ ...*you name it!*

by Coktel Vision

Take time to think!

In seeking "indicators of suspicion" in investigations, suspects will need to have had:

- ▶ **Motive** to commit the crime (for example, financial gain or to seek revenge)
- ▶ **Means** to commit the crime (including tools and physical capabilities)
- ▶ **Opportunity** to commit the crime (including being at the crime scene at the time of the offence)

## Mistakes and setbacks

Henri Lebesgue (1875–1941)

Nikolai Luzin (1883–1950)

*"I have not failed. I have just found 10,000 ways that won't work."*

— Attributed to  
Thomas Edison

*"It is impossible to live without failing at something, unless you live so cautiously that you might as well not have lived at all — in which case, you fail by default."*

— J. K. Rowling

## Impostor syndrome

*"I'm a cheat"*

*"Everyone knows more than I"*

*"I'm not capable"*

*"I am only here because of luck"*

## Impostor syndrome

*"I'm a cheat"*

*"Everyone knows more than I"*

*"I'm not capable"*

*"I am only here because of luck"*

Everyone has it.

No, really, everyone does!

## Impostor syndrome

~~"I'm a cheat"~~

~~"Everyone knows more than I"~~

~~"I'm not capable"~~

~~"I am only here because of luck"~~

Everyone has it.

No, really, everyone does!

Refute this. Talk to your mentor, supervisor, friends.

You are not alone!

Refute this. Talk to your mentor, supervisor, friends.  
You are not alone!

*“Every time you talk to a friend about a result, give a talk, or post a paper—let alone publish one—you are sharing your ideas. Most would argue that this is the key to advancing science in all areas.”*

The problem might be difficult inherently.  
Fermat's Last Theorem: c. 1637–1995

Pierre de Fermat

Andrew J. Wiles

What looks simple in retrospect is not always easy to find.

Georg Cantor

1874:  $[0, 1] \cong [0, 1]^2$  ?

1877:

$$\alpha = 0.a_1a_2 \dots a_n \dots$$

$$\beta = 0.b_1b_2 \dots b_n \dots$$

$$(\alpha, \beta) \leftrightarrow 0.a_1b_1a_2b_2 \dots a_nb_n \dots$$

Things take time.

## How to solve a problem?

- ▶ Understand the problem.
- ▶ Identify what works for **you**.
- ▶ Find an easier problem that you still cannot solve.
- ▶ Recognise that things take time.
- ▶ Remember that you are not alone!

I TRY NOT TO MAKE FUN OF PEOPLE FOR ADMITTING THEY DON'T KNOW THINGS.

BECAUSE FOR EACH THING "EVERYONE KNOWS" BY THE TIME THEY'RE ADULTS, EVERY DAY THERE ARE, ON AVERAGE, 10,000 PEOPLE IN THE US HEARING ABOUT IT FOR THE FIRST TIME.

FRACTION WHO HAVE HEARD OF IT AT BIRTH = 0%

FRACTION WHO HAVE HEARD OF IT BY 30  $\approx$  100%

US BIRTH RATE  $\approx$  4,000,000/year

NUMBER HEARING ABOUT IT FOR THE FIRST TIME  $\approx$  10,000/day

IF I MAKE FUN OF PEOPLE, I TRAIN THEM NOT TO TELL ME WHEN THEY HAVE THOSE MOMENTS. AND I MISS OUT ON THE FUN.

"DIET COKE AND MENTOS  
THING"? WHAT'S THAT?

OH MAN! COME ON, WE'RE  
GOING TO THE GROCERY STORE.

WHY?

YOU'RE ONE OF  
TODAY'S LUCKY  
10,000.
